TheoryMesh and food sustainability challenges

A bit background

Co-founders:

- Chris Bunio (mentor), Paul Westdal, Sephanie Westdal, Anne Kirk.
- Started 2019.
- Increasing transparency in the food supply chain.

Vision and Goals

1. Provide the platform to integrate data from first inputs to consumer purchase, creating a traceable, efficient and intelligent supply chain.
2. Certification.
3. Traceability.
4. Sustainability.

The problem proposed

Expectations

TheoryMesh's goals from the PIMS can be presented as:

- Model and predict the environmental impact from agricultural practices.
- Complement the current TheoryMesh system.
- Combine both systems to measure and predict sustainability levels of products and companies.

Impact on production and producers

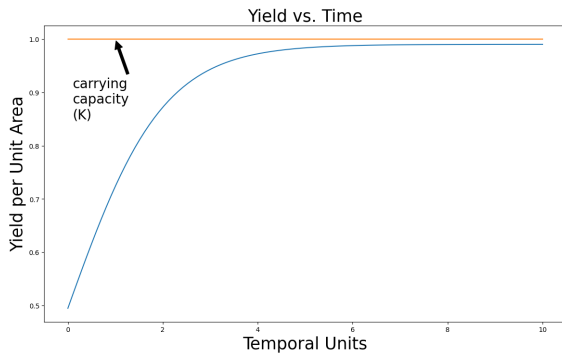

- From data to information.
- The impact on consumers.

5. Data analysis

What can be gleaned from the data?

- $K = K(x_1, x_2, \ldots, x_n)$, where no x_i is a temporal variable.
